LINKS:

Heroku: <https://projects-management-ade.herokuapp.com/>

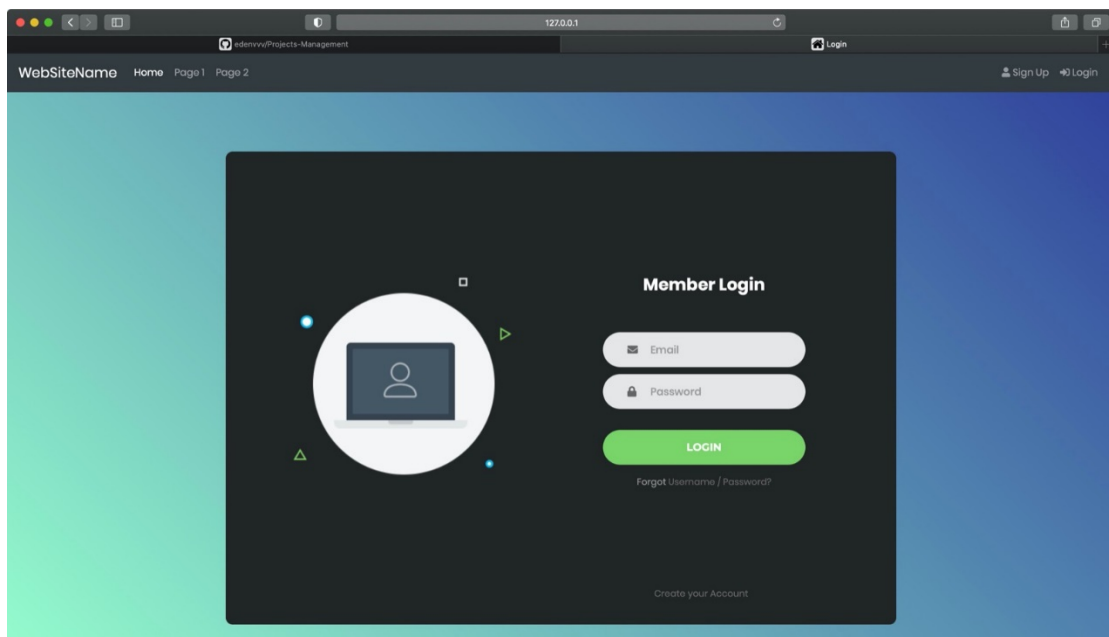

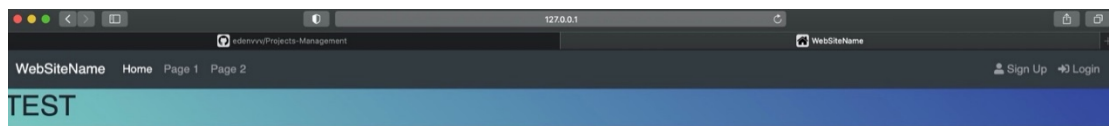

Github: <https://github.com/edenvvv/Projects-Management>

CircleCi: <https://app.circleci.com/pipelines/github/edenvvv/Projects-Management>

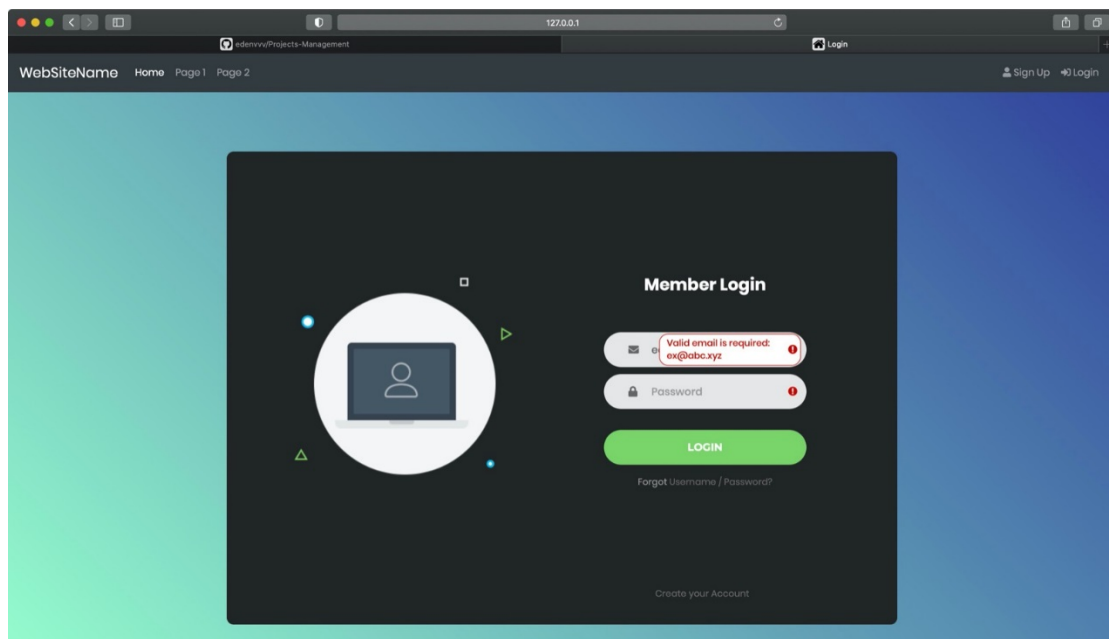

We performed an initial installation of the project (as per the requirements).

We created a landing page and a login page, we used EJS to avoid reusing the navigation bar and footer code.

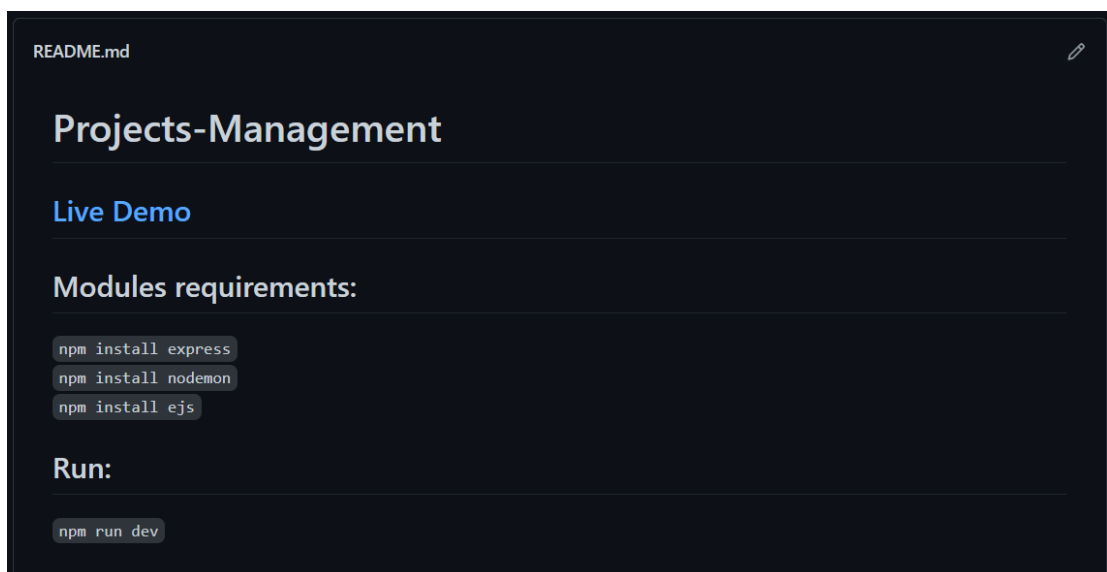

We used JavaScript's Express.js framework and also bootstrap.

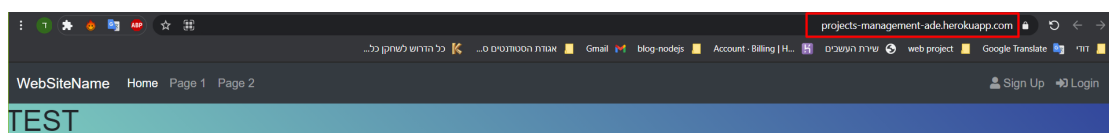

Login page must include validation:

We have added a README.md file which explains which modules should be installed before running the project and how to run the project:

We connected the CI / CD to our project using circleci and heroku:

edenvvv
